**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-3 & 5-23, drawn to electrochemical cell , classified in class 429, subclass 34.
  - II. Claims 24-29 & 31-33, drawn to electroconductive element, classified in class 429, subclass 12.
  
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require the electroconductive element to have a first and second surface. The subcombination has separate utility such as an external water collector or separator device.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

***Election/Restrictions***

3. If the invention of Group I is elected, then an election of Species is required. This application contains claims directed to the following patentably distinct species of the claimed invention:

I-a. Claim 12, a liquid distribution media having a first and second layer, where the second layer is more hydrophilic

I-b. Claim 13, a liquid distribution media having a first and second layer, where the second layer has a smaller pore size

I-c. Claim 14, a liquid distribution media having a first and second layer, where the second layer is planer

4. If the invention of Group II is elected, then an election of Species is required. This application contains claims directed to the following patentably distinct species of the claimed invention:

II-a. Claim 32, a porous layer having a second layer more hydrophilic than the first layer

II-b. Claim 33, a porous layer having a second layer with smaller pores than the first layer

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 1745

the prior art, the evidence or admission may be used in a rejection under 35

U.S.C. 103(a) of the other invention.
